- HD FINISH
- ANTI-ALGAL & ANTI-FUNGAL

Make a statement that lasts for years to come – Shield your home exteriors with Maximum protection, performance and beauty with our luxury exterior emulsions!

DIRECTIONS FOR USE

NEW SURFACE PREPARATION: Concrete, masonry and plasters must be cured for at least 4–6 weeks before painting. pH of the surface must be 13 or below and must be internally dry and free from dust, dirt, or loose particles, grease, chalking, etc. Sand the surface with emery paper no. 180 and wipe it clean to remove loose aggregates. All seepage, leakage and dampness on the surface should be suitably rectified. All fungus/algae-affected areas must be treated. Prime concrete and plaster with Primera Exterior Wall Primer and allow to dry for 6–8 hours. For any surface undulations, apply a thin coat of JKCement WallMaxX Wall Putty and allow it to dry for 4–6 hours. Sand the surface with emery paper 180 and wipe it clean. Apply another coat of Primera Exterior Wall Primer and allow it to dry for 6–8 hours. Sand the surface with emery paper no. 320 and wipe it clean.

APPLICATION: Apply 2–3 coats by diluting 1 litre of Exterior Emulsion with 300–400 ml of water at an interval of 4–6 hours between the successive coats. Exterior Emulsion can be applied by brush, roller, or spray.

SAFETY PRECAUTIONS: Stir the contents thoroughly and strain before using. Store Exterior Emulsion in cool and dry place. Keep the container tightly closed. When not in use, wash the brush/equipment with water immediately after use.
