How to Apply

Surface Preparation

- For best results, proper surface preparation is essential.
- Newly plastered surfaces should be allowed to mature for 6-8 weeks.
- The surface to be painted should be clean, dry and free from dust, dirt, or loose particles, grease, chalking etc.
- This should be done by washing the surface with water.
- All surfaces to be painted should be thoroughly sanded with emery paper no. 180 and wiped clean.
- All surface seepage or leakage should be properly repaired.
- All fungus/algae-affected areas must be treated.

Application

Primer - Apply a coat of JK Primera Interior Wall Primer and allow drying for 4-6 hours.

Putty - Smoothen the surface by filling pinholes or cracks with a thin coat of JK WallMaxx Putty and allowing it to dry for 4-6 hours. Sand the surface with emery paper no. 180 and wipe it clean.

Primer - Apply another coat of JK Primera Interior Wall Primer and allow it to dry for 4-6 hours. Sand the surface with emery paper no. 320 and wipe it clean.

Topcoat - Dilute 1 litre of JK WipEasy DUO+ Super Premium Interior Emulsion with 400-500 ml of water. Apply 2-3 coats of this diluted paint with a gap of 4-6 hours between two coats.

Safety Precautions

- Do not apply when ambient temperature is less than 10°C or if the temperature might drop to this level within 4 hours of application.
